LUMBER COLOURS

STANDARD 100% RECYCLED PLASTIC LUMBER COLOURS

Wishbone recycled plastic boards are non-toxic, ultra-durable and low maintenance. They are easy to clean and can be renewed from UV damage. The recycled material is simply excellent for the demands of outdoor commercial furniture while also helping to divert waste plastic from landfills.

NATURAL WOOD ALTERNATIVES

For applications where wood is preferred, Wishbone has several options. **Stains or oils specified by the customer can optionally be applied by Wishbone during manufacture.** Contact us for further details.

ACCOYA®
MODIFIED WOOD GREY

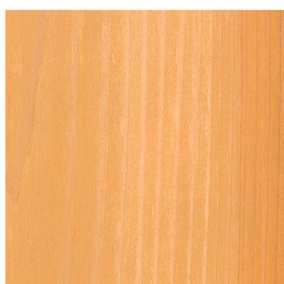

ACCOYA®
MODIFIED WOOD NATURAL

Accoya® Modified Wood is based on a proprietary process that transforms fast-growing, certified sustainable timber into a high performing lumber with superior hardness and durability characteristics, including exceptional rot resistance.

HARDENED BAMBOO

Hardened Bamboo involves modifying full length bamboo strands under intense heat and pressure. It outperforms conventional hardwoods such as Ipe for hardness, dimensional stability and fire resistance. Most significantly, it requires very little maintenance and can be sanded on site to remove graffiti or minor scratches.

RED CEDAR

Western Red Cedar is sourced from British Columbia and has excellent natural oils that resist insects, rot and decay. While softer than hardwoods, its superior durability, aesthetic beauty and dimensional stability make it an excellent choice for outdoor use, even without additional treatment.
